The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the CC specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) cancer in a patient;
(d) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;
(e) assessing the prostate cell carcinogenic potential of a compound;
(f) assessing the prostate cell carcinogenic potential of a compound;
(c) determining whether prostate cancer has metastasized in a patient;
(d) assessing the aggressiveness or inaliance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                몽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δ

                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid molecule (I) comprisis a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;

(d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;

(e) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient;

(f) assessing the prostate cell carcinogenic potential of a compound;

(g) determining whether prostate cancer has metastasized in a patient;

(h) assessing the aggressiveness or indolence of prostate cancer in a

The present invention describes a method for examining ischaemic cc conditions, comprising measuring the expression levels of particular cc genes (I) in a test sample or determining the expression profile of a cc gene group in the sample comprising genes selected from (I). The method cc is useful for examining the ischaemic condition (e.g. compressive cc ischaemia, occlusive ischaemia or vasospatic ischaemia) by measuring cc expression levels of particular genes (AB199202 to AB19912, encoding cc expression profile of a gene group comprising these genes. The cc expression profile of a gene group comprising these genes. The cc expression levels or expression profiles produced by these genes are cc used as an indicator when screening for ischaemic condition-improving cc drugs or therapeutics for ischaemic diseases. AB19913 and AB199914 cr represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                     Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these

CC Also included are; (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non-cc translated sequence that functions in the cell to cause termination of CC transcription and addition of polyademylated ribonucleotides to a 3' end CC of the mRNA molecule; and (2) determining a level or pattern of a 3' end CC molecule in a bovine cell or tissue comprising: (a) incubating a marker CC nucleic acid (comprising any of the 15112 nucleic acid sequences or its CC complement or fragment) with a complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the CC detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid is predictive of the level or pattern of the complementary nucleic acid is used for determining a level or pattern of the mapping, gene identification and analysis, cattle breeding, preparation of constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression, or for genetically constructs for use in cattle gene expression of the 15112 bovine constructs for use in cattle gene expression of the specification but was obtained in electronic format from the USBTO web site:

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1837
                                                                                                                                                                                                                                                                                                                                                                                                                The sequence data for this patent did not form specification, but was obtained in electronic fat ftp.wipo.int/pub/published_pct_sequences.

                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                       sequences (ABL01840
(ABB57737-ABB72072)

                                                                                                                                 밁
                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                         The invention relates to a purified nucleic acid molecule associated with CC lactation or muscle and fat deposition (designated LMFD), derived CC from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 1512 nucleotide CC Also included are; (1) a transformed cell having a nucleic acid CC emprising an LMFD nucleic acid linked to a promoter and a 3' non-CC transcription and addition of the ment in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end CC molecule in a boyine cell or tissue comprising; (a) incubating a marker complement or fragment) with a complementary nucleic acid molecule; and (2) determining a level or pattern of a complement or fragment) with a complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the carried acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid is used for detection of the complementary nucleic acid is used for determining a level or pattern of the mapping, gene identification and analysis, cantule breeding, preparation of of a molecule in a bovine cell or tissue. It is useful for genome companies, gene identification and analysis, cattle breeding, preparation of improving cattle. The present sequence is one of the 15112 bovine cell or pattern but he specification but and specification but he specification but as preparation and the specification but he specificatio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
The invention relates to a purified nucleic acid molecule associated with CC lactation or muscle and fat deposition (designated LMFD), derived CC from cattle, and the LMFD nucleic acid can specifically hybridise to a Second nucleic acid molecule comprising any of 15112 nucleotide CC sequences, appearing as ABX34836-ABX49947, or complements of them. CC Also included are; (1) a transformed cell having a nucleic acid CC comprising an LMFD nucleic acid linked to a promoter and a 3' non-CC translated sequence that functions in the cell to cause termination of CC transcription and addition of polyadenylated thouncleotides to a 3' end CC molecule in a bovine cell or tissue comprising: (a) incubating a marker CC nucleic acid (comprising any of the 1512 nucleic acid sequences or its CC complement or fragment) with a complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the CC detection of the molecule; and (b) detection of the complementary nucleic acid permits the CC complementary nucleic acid is predictive of the level or pattern of the molecule. The LMFD nucleic acid is used for determining a level or pattern
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (BYAT/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             of a molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle breeding, preparation of constructs for use in cattle gene expression, or for genetically improving cattle. The present sequence is one of the 15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The present sequence was not shown in the specification but was obtained in electronic format from the USPTO web site:
                         Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in th genome corresponding to positions where M. tuberculosis strains CDC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mycobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mycobacterium tuberculosis; strain H37Rv; strain CDC variation; epidemiology; patient treatment; epidemic

The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of cuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 4411529 BP; 758565 A; 1449983 C; 1444602 G; 758379 T; 0

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABLIG511), expressed DNA sequences (ABLIG1819), expressed DNA sequences (ABLIG1819).
                                                                                                                                                                                                                                                                                             at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               닭
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                        New isolated nucleic a genes from Drosophila interactions -

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid genes from Drosophila and

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 4356 BP; 1165 A; 942 C; 1021 G; 1228 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequences (ABL01840

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Warren, Wesley C.

APPLICANT: Byatt, John C.

APPLICANT: Byatt, John C.

APPLICANT: Byatt, John C.

TITLE OF INVENTION: NUCLEIC ACID AND OTHER MOLECULES ASSOCIATED WITH LACTATION AND TITLE OF INVENTION: NUCLEIC ACID AND EAT DEPOSITION

FILE REFERENCE: 16511.006/37-21(10298)C

CURRENT APPLICATION NUMBER: US/09/960,352

CURRENT FILING DATE: 2001-09-24

INUMBER OF SEQ ID NOS: 15112

SEQ ID NO 7555

LENGTH: 346

TYPE: DNA

OTHER INFORMATION: Clone ID: 32-LIB34-076-Q1-E1-H7

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
